Senior engineer with 12+ years building data-intensive systems, focused on anti-financial-crime and fraud platforms at banking scale. Hands-on across Ruby, Java, and Go — from large-scale data pipelines to real-time fraud detection and response.

## EXPERIENCE

### **Senior Ruby Engineer, Sep 2022 – Present**

Solaris Group, Chennai

- Led a 5-engineer team owning Identity and Anti-Financial Crime systems — due diligence, fraud detection, and device security.
- Rebuilt Customer Due Diligence pipelines for daily checks across 6M customers, cutting full-population processing from 12 hours to 4.
- Extended the device-monitoring service (Java) — the single SEON integration point called by 5+ banking systems — adding touchpoints and throttling, and driving cross-team integration.
- Built a fully async fraud-response system with a pluggable remediation framework, running automated actions (block binding, lock account, partner webhook) within 10 seconds.
- Evolving to a hybrid model with synchronous checks at critical actions — transaction authorization, web login — to block fraud before it completes.
- Enhanced device binding (Go) with QR-code enrollment via a mailed code, rolled out to a partner's full 700k-customer base.

## EDUCATION

**MNM Jain Engineering College,**  
**Anna University, Chennai**  
**B.E, Computer Science Engineering**  
**2009 – 2013**

## SKILLS

Ruby, Ruby on Rails, Grape, Java, Go, Javascript, ReactJs, AWS, ECS, CloudWatch, SNS+SQS, ElasticSearch & ELK, Redis - Resque, Sidekiq, MySQL, Postgres, Shell Scripting, Docker, Docker Compose, Terraform, RSpec, Capybara

### **Principal Software Engineer, Jan 2016 – Aug 2022**

PromptCloud, Bengaluru

- Led end-to-end development of three products — PromptCloud (web-scraping platform), JobsPikr (jobs-data feed), DataStock (dataset repository) — from concept to production.
- Took JobsPikr from concept to a distributed ElasticSearch pipeline processing 1M+ job postings and handling 20M ingestions and ~1M real-time queries daily, across internal and external use cases.
- Built real-time monitoring and alerting on ELK, surfacing the metrics behind infrastructure and capacity decisions.
- Built and operated multiple Ruby on Rails apps end to end — features (invoicing, ticketing, payments, dashboards) and infrastructure (provisioning, CI/CD).

### **Software Engineer, Nov 2013 – Dec 2015**

UDProducts, Chennai

- Developed, deployed and maintained Ruby on Rails applications for clients.
- Created APIs facilitating mobile server communication(both iOS and Android) and integrated 3rd party APIs.
- Communicated with clients and onshore team on regular basis to gather requirements and coordinate with mobile dev team to accomplish goals in a timely manner.
